Abjuration

Available in Willpower

The following three Abjuration styles, *Filter*, *Retrogradient*, and *Ward* allow you to create protective wards and barriers. If you have ranks in any of these three styles you can induce the following cascade event.

Create Ward
This event creates a translucent barrier of force. The durability, size, and duration of these barriers are all equal to your Willpower score plus the sum of your ranks in all three *Abjuration* styles. Durability indicates the number of points of damage the barrier can take before it is destroyed, size indicates the maximum width and height in meters your barriers can be, and duration indicates the maximum number of rounds they last for if they are not destroyed or dismissed by you as a free action.

When creating a barrier it appears on a straight line of your chosing that crosses any adjacent space. If this line crosses any occupied spaces, you chose which side of the barrier the occupier is on.

Barriers cannot be crossed by anything and provide full cover until they are destroyed, their duration expires, or you dismiss them. Any attack targeting the barrier or blocked by the barrier deals deals damage to the barrier, reducing it's current durability by the amount of damage done. An attack that reduces durability to 0 destroys the barrier but deals no further damage to anything behind the barrier.

Barriers block things in the Yau as well as physical objects. However, characters with a sum of ranks in *Sublimation* styles that exceed the current durability of the barrier can phase through it while in the Yau.

The appearance of barriers varies with the individual creating them, and you do have a degree of control over the cosmetic appearance of each one you create. However, unless you have ranks in the style *Filter*, your barriers are always transparent enough not to hinder vision but still easily visible due to a faint color and luminosity.

Filter

When using the ***Create Ward*** event you may add filtering properties to the barrier you create. These filters cannot be used to cause damage; for example, if a blocked object is inside an object that can pass, then both objects are blocked. Additionally, any ranks in this style allow you to choose if your barrier is opaque, translucent, or completely invisible (normally they are transparent, easily visible, and faintly luminous).

Rank 1: When creating your barrier you can target it to a single individual object or entity. The target is either the only thing the barrier blocks, or the only thing that the barrier allows to pass. Things that can pass through the barrier can only do so while moving at speeds slower than 1 space per round. For each additional point of Entanglement spent, you may choose another target.

Rank 2: When creating your barrier you can target it to a specific class of objects, a specific type of entity, or a specific homogenous substance. For example, you could make selections such as, metallic objects, humans, or oxygen. Things allowed through the filter can pass through it at any speed. For each additional point of Entanglement spent, you may choose another target.

Additionally, you can create bio-filters that are capable of removing substances, such as undesirable pathogens or toxins, from a person passing through it. Anyone unaware of the nature of this bio-filter, unwilling to undergo its effects, or moving faster than 1 space per round cannot pass through it.

Rank 3: When creating your barrier you can opt to choose what it filters on a case by case basis. You are aware of anything that comes within a space of the barrier no matter where you are, and if it is about to pass through you can choose whether to allow it or block it. If it returns a second time you can change your previous choice. Creating invisible barriers with this property can allow you discretely monitor an area or set up traps.

Retrogradient

This style allows you to use a defensive action with a speed cost of 1 and an Entanglement cost of 1 to project a defensive field around yourself that lowers the damage of a single incoming attack. Firearms, Ballistics, and Kinetic attacks and any other projectile must move further through this field than others, resulting in greatly reduced damage.

Rank 1: Ranged attack damage is lowered by 1 point. Unarmed and Melee attacks are unaffected.

Rank 2: Ranged attack damage is lowered by 3 points and Melee attack damage is lowered by 1 point. Unarmed attacks are unaffected.

Rank 3: Ranged attack damage is lowered by 6 points, Melee attack damage is lowered by 3 points, and Unarmed attack damage is lowered by 1 point.

Ward

This style improves the duration of barriers created by the ***Create Ward*** event and allows you to spend extra Entanglement to increase their size and durability. Additionally, if you have any ranks in this style you may make a barrier that is a sphere with a maximum size equal to the sum of your ranks in all three Abjuration styles. You must be inside, or adjacent to, this sphere when creating it.

Rank 1: The duration of your barriers is now measured in minutes instead of rounds. Each extra point of Entanglement spent when creating a barrier increases it's durability and maximum size by 1.

Rank 2: The duration of your barriers is now measured in hours. Each extra point of Entanglement spent increases on a barrier increases its durability and maximum size by 3.

Rank 3: The duration of your barriers is now measured in days. Each extra point of Entanglement spent increases on a barrier increases its durability and maximum size by your **Willpower** score.

Chromodynamism

Available in Intelligence

The following 3 Chromodynamism styles, *Condense Matter*, *Entropic Combat*, and *Transmute Matter* deal with manipulating the fundamental force of Chromodynamism, allowing you to transform matter into other forms. In addition to the abilities these styles give you, any ranks in them also grant you the ability to induce the following cascade event.

Entropic Attack
When inducing this event you must touch a target to decay and destabilize its atomic structure. Humans thus afflicted experience internal hemorrhaging, abraded flesh, and decaying bones.

The sum of your ranks in the three *Chromodynamism* styles determines the duration of your entropic attacks. At the end of each round, including the current round, the target takes a point of damage on all locations and the remaining duration decreases by one. This effect ends before the duration expires if you will it to or if you become unconscious. A target cannot be affected by more than a single entropic attack at once.

Entropic attacks ignore armor and any other protection that may reduce damage dealt. However, if a target is protected by the *shield()* artifact function, entropic attacks damage the shield's current durability instead of the target.

Condense Matter

This style allows you to induce the non-combat cascade event ***Alter Material*** to create solid objects out of thin air. The maximum amount of material you can make per event is a sphere with a diameter of 10 centimeters per rank you have in *Chromodyamism* styles.

You cannot control the shape of this material, it forms a rough sphere with a texture determined by the crystalline properties of whatever material you created. With this style alone, you can only create single chemical elements. For example, you could create oxygen or carbon, but not carbon dioxide. You cannot create any element that would immediately react violently with itself or the atmosphere.

The style *Transmute Matter* also grants the ***Alter Material*** event. If you have ranks in both styles you can combine their effects into a single usage of this event, allowing you to create and shape more complex materials in any state at the same time.

Rank 1: Your ***Alter Material*** events can condense ambient gases into any homogenous liquid or solid material.

Rank 2: Your ***Alter Material*** events can skim the virtual particles out of an absolute vacuum and condense them into any homogenous liquid or solid material, or alternatively this event can be used to instantly destroy a one meter sphere of matter.

Rank 3: You can induce the following non-combat cascade event.

Create SIM
This event takes 8 hours of work to induce. Over the course of this duration you slowly accrete a small amount of strong interaction material, also known as quark matter. This material is not composed of atoms, instead it is a single macroscopic hadron, a dense mass of many quarks bound together by the strong nuclear force. As such, it is indestructable and has a mirror-like smoothness that cannot be scratched by normal matter.

Bladed weapons made of SIM deal an extra point of damage. Armor made of SIM provides an extra point of protection when compared to armor of a similar weight.

The amount of SIM created by a single 8 hour usage of this event is a number of cubic centimeters equal to your Intelligence score. With each event you can create a new SIM object or increase the size of an existing one, but these objects cannot be further worked or shaped by any other means. You have enough control over the shape of SIM when you create it to create small features and sharp edges, but not enough control to make machines or moving parts.

Entropic Combat

This style improves your ability to utilize ***Entropic Attack*** events in tactical situations.

Rank 1: Your entropic attacks no longer require you to touch the target and instead have a range of 2. Additionally, your entropic attacks ignore the protection granted by *shield()* functions.

Rank 2: You may cause these attacks to deal damage (and reduce remaining duration) every turn the target takes an action other than resting. If the target only takes rest actions, damage and duration ticks occur at the normal rate of every round.

Rank 3: Your entropic attacks now have a range of 3 and a second duration equal to your Intelligence score. While both durations still remain, the target is dealt 2 damage each tick. If only one of the durations remain, the target is dealt normal damage.

Transmute Matter

This style allows you to induce the non-combat cascade event ***Alter Material*** to transform any unnattended non-living material you touch into other materials. The maximum amount of material you can transform per event is a sphere with a diameter of 10 centimeters per rank you have in *Chromodyamism* styles.

With this style alone, any material you transform with this event must remain in the same state (solid, liquid, or gas) it was originally in. You cannot create any substance that would immediately react violently with itself or the atmosphere.

The style *Condense Matter* also grants the ***Alter Material*** event. If you have ranks in both styles you can combine their effects into a single usage of this event, allowing you to create and shape more complex materials in any state at the same time.

Rank 1: Your ***Alter Material*** events can transform any homogenous compound into any other homogenous compound. For example, you could turn water into gasoline, or salt into carbide. When transmuting solid objects, you can reshape them into any shape with features no smaller than a centimeter.

Rank 2: Your ***Alter Material*** events can transform any homogenous or composite material into any other homogenous or composite material. For example, you could turn wood into surface-hardened metal alloys. When transmuting solid objects, you can reshape them into any shape including small features and sharp edges.

Rank 3: Your ***Alter Material*** events can transform any substance into any other with enough control the over the shape and structure create moving parts and functional machines. The only restriction is that you can only create objects that you have the knowledge of how to create by mundane means. For example, if you had sufficient skill as a mechanic you could turn a block of wood into an engine or if you knew enough about guns you could mold a brick into a working loaded revolver.

Electromagnetism

Available in Intelligence

The following 3 Electromagnetism styles, *Photonic Combat*, *Redirect Waveform*, and *Transmute Waveform* allow you to manipulate light, radio waves, x-rays, electricity, and magnetism. In addition to the abilities these styles give you, any ranks in them also grant you the ability to induce the following cascade event.

Photonic Attack
This event blasts a target with a beam of light or an electrical discharge. This event has a speed cost of 6 and creates an attack always hits the target in a bodily location of your choice, but cannot critical. This attack has a range and does a number of points of damage equal to your Intelligence score or equal to the number of ranks you have in *Electromagnetism* styles, whichever is lower. This damage is completely negated by *shield()* functions.

Modulate Waveform

This style grants you extremely fine control over low-intensity electromagnetic phenomena.

Rank 1: You can convert any part of the electromagnetic spectrum that enters your eyes into visible light. This allows you to sense radio waves, x-rays, infrared, or ultraviolet light at any time.

Rank 2: You gain the ability to induce the following two cascade events.

Alter Wavelength
You can change one wavelength of the light in a 1 meter space. This may make invisible parts of the spectrum visible to others, or hide the visible light entering this space.

Write to Retina
After inducing this event, you can carefully target photons onto the retinas of anyone you can see for the rest of the scene. This allows you to send people simple written messages, or to show them simple unmoving illusions. These illusions may be effective at startling someone, but as soon as the target moves their head their illusory nature is revealed.

Rank 3: Electormagnetism is the force that dominates chemistry, however most *Electromagetism* styles are to crude to influence these small processes. At this rank, you can now influence chemistry with the following non-combat cascade event.

Manipulate Chemistry
You can control the outputs of any ongoing non-living chemical process. This cannot be used to create elements that are not present, but it can create any compound that can be made from existing elements.

Redirect Waveform

This style allows you to manipulate the path light, electricity, or magnetism follows. It will follow this new path for a number of minutes equal to your Intelligence score and no part of the altered path can be further from the original path than a number of meters equal to your Intelligence score.

Any usage of this style is a non-combat cascade event.

Rank 1: You can change the path of any electromagnetism that is less intense than the electricity in household wiring, the light of a 100 watt lightbulb, or the magentism of a 6 inch rare earth magnet. This enables you to short circuit any electronic device, permanently disabling it.

Rank 2: You can change the path of any electromagnetism that is less intense than the electricity in an overhead residential power line, the light of a high-intensity spotlight or a small sunbeam, or the magnetism of an industrial electromagnet. This also enables you to designate a number of spaces equal to your Intelligence score, any objects or entities you choose will be be invisible for the duration of this event as long as they remain in one of these spaces.

Rank 3: You can change the path of any electromagnetism that is less intense than the electricity in a high-tension distribution line or a 1 meter beam of direct sunlight. This also enables you to designate a number of spaces equal to your Intelligence score; light cannot propagate in these spaces. No one can see through the black darkness in these spaces and anyone inside them is blinded. If you have any ranks in the style *Modulate Waveform* you can see through these spaces normally.

Transmute Waveform

This style allows you to convert the electromagnetism in a localized area from one form to another. The duration of this event in minutes and the number of spaces it can effect are both equal to your Intelligence score.

Any usage of this style is a non-combat cascade event.

Rank 1: You can convert small amounts of ambient energy from one form of electromagnetism to another. For example, you could turn the static generated by a person moving into a soft glow on their body, or you could turn a portion of ambient light into an electrical discharge that deals a point of damage to anything in the affected area each round.

Rank 2: You can convert large amounts of flowing energy from one form of electromagnetism to another. For example, you could cause a power line to emit light bright enough to temporarily blind anyone that looks at it, or you could turn sunlight into an electrical discharge that deals 3 points of damage to anything in the affected area each round, anyone struck by this damage is stunned for their next turn and ejected into an adjacent space unaffected space.

Rank 3: You can create any form of electromagnetism, or cause it to dissipate into heat or friction in the affected area. Additionally, you gain the ability to induce the following non-combat cascade event.

Create CM
This event takes 8 hours of work to induce. Over the course of this duration you slowly accrete a small amount of covalent matter. This material is a flawness network atoms bound by the strongest chemical bonds possible and can be considered a single macroscopic molecule. This material can be transparent or opaque has tensile strength comparable to graphene, resistance to deformation similar to hardened steel, and hardness comparable to diamond, but it is much lighter than any of these materials.

Melee weapons made of CM have a speed cost reduced by 1 (to a minimum speed cost of 2), however blunt weapons relying on weight may deal reduced damage if they are made of this light material. Well crafted heavy armor made of CM does not incur any penalties when wore, however the Perception penalty imposed by upper body armor is only removed if the headgear is made with transparent CM.

The amount of CM created by a single 8 hour usage of this event is a number of cubic centimeters equal to your Intelligence score. With each event you can create a new CM object or increase the size of an existing one, but these objects cannot be further worked or shaped by any other means. You have enough control over the shape of CM when you create it to create small features and sharp edges, but not enough control to make machines or moving parts.

Evocation

Available in Willpower

The following 3 Evocation styles, *Cascade Discharge*, *Combat Evocation*, and *Evocation Extensibility* allow you to attack your enemies with a torrent of energy. If you have ranks in any of these three styles you can induce the following cascade event.

Evocation Attack
Blast a target within a range of 3 dealing a damage roll of **Willpower + the sum of your ranks in these three styles.** This attack always hits its target in the bodily location of your choice, but cannot critical.

You cannot be hurt by you own evocation attacks but an ally can be. The cosmetic appearance of evocation attacks is different for every character. When first acquiring any of these styles decide what your character's evocation attacks look like. No matter what form yours take, they cannot be done discretely and are always loud, overtly visible, and impossible to hide.

Cascade Discharge

This style allows you to greatly increase the damage output of ***Evocation Attack*** by completely collapsing the entirety of a runaway cascade effect onto the target.

Rank 1: You may spend extra Entanglement on when using an ***Evocation Attack***, for each extra point you spend, add **1 + 1** to the damage roll.

Rank 2: For each extra Entanglement point you spend, add **2 + 2** to the damage roll.

Rank 3: For each extra Entanglement point you spend, add **3 + 3** to the damage roll.

Combat Evocation

This style makes you more adept at using the ***Evocation Attack*** event in tactical situations.

Rank 1: The range of your evocation attacks increases to 6 and their speed cost decreases to 6. Additionally, your evocation attacks can ignite any highly flammable materials they strike.

Rank 2: The range of your evocation attacks increases by 12. Additionally, you may execute an evocation attack that is silent and invisible, however when doing so all automatic successes are removed form it's damage roll.

Rank 3: The range of your evocation attacks increases to anything in your line of sight and their speed cost decreases to 4. Additionally, you may push targets 1 space away from you when they are hit by your evocation attacks.

Evocation Extensibility

This style allows the ***Evocation Attack*** event to affect a larger area.

Rank 1: Targets struck by your evocation attacks are dealt damage to all bodily locations.

Rank 2: Your evocation attacks also damage everything in an adjacent space to your target.

Rank 3: Your evocation attacks also damage everything within a radius of 3 spaces from your target.

Gravitonertia

Available in Intelligence

The following 3 Gravitonertial styles, *Alter Mass*, *Redirect Momenta*, and *Telekinesis* allow you to manipulate density, mass, and motion. If you have ranks in any of these three styles you can induce the following cascade event.

Kinetic Attack
Levitate a small object and throw it at a target with bullet-like force. Both the attack and damage roll for this attack are **Intelligence + the number of ranks you have in *Gravitonertia* styles**. These attacks can critical and have a range equal to your Intelligence score. Any defensive actions or effects treat kinetic attacks as firearm attacks.

At the GM's discretion kinetic attacks may not be possible in some environments that do not have small, hard, unattended objects available. You may carry small objects to use as ammuntion into areas too barren to provide ammunition.

Alter Mass

You can induce the ***Alter Mass*** cascade event. This event causes an unattended non-living object of a size up to 10 centimeters per point of Intelligence you have to change mass for the rest of the scene. The amount it changes by is determined by your ranks in this style.

Rank 1: Increase an object up to double it's original mass, or reduce it down to half of it's original mass.

Rank 2: Increase an object up to triple it's original mass, or reduce it down to one quarter of it's original mass.

Rank 3: Increase an object up to quadruple it's original mass, or reduce it down to 10% of it's original mass.

Create DM
This event takes 8 hours of work to induce. Over the course of this duration you slowly accrete a small amount material with a dynamic mass. The inertial and gravitational mass of this material can be toggled by applying a small electric current. Equipment utilizing this material requires a small power source in order to toggle the mass, commercially available batteries are typically sufficient for tools, weapons, and armor utilizing this material.

Blunt melee weapons made of this material and firearms modified to fire ammunition made of this material deal two extra dice of damage by increasing and decreasing mass at critical moments. A full body suit of armor can be designed using this material to improve it's wearer's Strength score by one.

The amount of dynamic mass created by a single 8 hour usage of this event is a number of cubic centimeters equal to your Intelligence score. With each event you can create a new dynamic mass or increase the size of an existing one, but these objects cannot be further worked or shaped by any other means. You have enough control over the shape of CM when you create it to create small features and sharp edges, but not enough control to make machines or moving parts.

Redirect Momenta

This style allows you to manipulate the motion of nearby objects and improves your kinetic attacks.

Rank 1: You can induce a cascade event that allows you to redirect all incoming projectiles for the rest of the round. Any projectile that would normally hit you during this round cannot critical, and you may adjust where it hits you by one location per rank you have in *Gravitoneria* styles. If can you adjust the location to either 0 or 6, it misses you entirely. If you can adjust where it hits by 3 locations more than you needed to make it miss you, you can cause it to instead hit an adjacent target in a location you choose.

Rank 2: As a non-combat cascade event you can change the direction of a moving roughly car sized or smaller object by up to 45 degrees. Addtionally, you can may choose two targets for a single kinetic attack. When attacking more than one target, make the attack and damage rolls with all automatic successes converted to dice. Use the same roll results for both targets.

Rank 3: As a non-combat cascade event you can change the direction of a moving object with enough force to derail a freight train. Addtionally, you can may choose up to three targets for a single kinetic attack. When attacking more than one target, make the attack and damage rolls with all automatic successes converted to dice. Use the same roll results for all targets.

Telekinesis

You can induce the ***Levitate Object*** cascade event. This event causes an unattended non-living object to levitate. You can will this object to move at a rate of 1 meter per round. If you take damage, or are otherwise caused to lose concentration, this object falls, otherwise you may continue levitating it for the rest of the scene. You may spend any amount of Entanglement when creating this event, the number of ranks you have in this style determines how much weight can be lifted per Entanglement spent.

Rank 1: You can levitate up to 3 kilograms per point of Entanglement you spend.

Rank 2: You can levitate up to 30 kilograms per point of Entanglement you spend.

Rank 3: You can levitate up to 300 kilograms per point of Entanglement you spend. Additionally, you may use this event to levitate your own body or the body of a willing target.

Pneumaplegia

Available in Charisma

The following 3 styles, *Bolstering Field*, *Halting Field*, and *Draining Field* grant you the following cascade event that hinders the combat effectiveness of anything that enters an area.

Mitigation Event
Select a number of contiguous spaces of solid ground equal to your Charisma score. For a number of rounds equal to your Charisma score, the targeted spaces fill with a faint haze that can only be noticed by getting two successes on a **Perception + Awareness** roll. These three styles determine what happens to anyone entering this event, and anyone that exits it immediately loses a number of points of Speed equal to the sum of your ranks in these three styles.

Exiting an affected space into another affected space does not trigger the speed loss or any other exiting effect, only leaving into an unaffected space triggers these effect.

Bolstering Field

This style allows you create events that boost allies instead of hindering foes.

Rank 1: You can induce the following cascade event.

Bolstering Event
You create a mitigation event that has positive effects instead of negative ones. Any Speed loss or damage it would normally cause is replaced by an equal amount Speed gained or healing. Any effects that end turns do not occur. Allys may linger in affected spaces to continue healing, but can still only experience a single event one time.

Rank 2: In addition to any other effects, your bolstering events heal a point of damage on anyone that ends a round in one.

Rank 3: Anyone inside your bolstering events can move to any other affected space as a move action costing 1 speed.

Draining Field

This style causes your mitigation events to drain more than just Speed and allows them to last longer, be more discreet, and faster acting.

Rank 1: Any time your mitigation events drain more Speed from someone than they currently have, they lose the difference in any combination of Endurance and Entanglement. Any Endurance lost this way is recovered after a resting.

Rank 2: The duration of your mitigation events is now measured in hours instead of rounds. Additionally, any time someone enters your mitigation events you are immediately aware of it, regardless of where you are. Additionally, when creating mitigation events you may choose if they have their normal hazy appearance, are vibrant and immediately noticeable to all, or completely invisible.

Rank 3: Any time someone enters your mitigation events you may choose if they are affected normally, completely unaffected, or if they trigger both the entrance and exit events immediately.

Halting Field

This style causes your mitigation events to stop people in their tracks, briefly trapping them inside and potentially beginning to damage them.

Rank 1: Anyone that enters your mitigation events must immediately end their turn inside of it.

Rank 2: Anyone that enters your mitigation events must immediately end their turn inside of it and can take no further actions for the rest of the round.

Rank 3: Any time someone starts a round inside of your mitigation events they are dealt a point of damage on all locations.

Schizosomata

Available in Charisma

The following 3 styles, *Emulate*, *Fade*, and *Shift* allow you to control how you are perceived and to be more flexible with your capabilities.

In addition to any capabilities these styles grant you, the sum of your ranks in all three of them determine the maximum number of "floating styles" you can accrue. Any time you get at least an eight hour rest you can start the process of reconfiguring your Yau body by unlearning any styles you know, the original cost of these styles then becomes floating style points. At any later time you get at least an 8 hour rest you may spend these floating style points to buy new styles.

Emulate

This style allows you to copy skills and even cascade events you witness in use by utilizing the following cascade event.

Emulate Skill
After you witness someone using a skill that they have a greater score in than you do, for the next hour you may activate this event. You temporarily gain a number of points in that skill equal to your rank in this style. The duration of this temporary skill is determined by your rank in this style.

Rank 1: You have access to this boosted skill until the next roll you make that uses it.

Rank 2: You have access to this boosted skill for the next minute.

Rank 3: You have access to this boosted skill for the rest of the scene. Additionally, instead of boosting a skill you may use any cascade event one time if you witness someone else use in the last hour.

Fade

This style allows you to temporarily become less noticeable, invisible, and even to remove yourself from other's memory.

Rank 1: You can induce the following cascade event.

Fade Self
You become less noticeable for the rest of the scene. In any environment where seeing a person isn't alarming, all people that see you assume you are supposed to be there or that you are someone else's problem. You do not become invisible, people simply just feel no need to pay attention to your presence. People that know you will still recognize you and you appear clearly in any security footage. In more restricted environments you may need to make a **Charisma + Stealth** roll for this effect to work, the difficulty of which is determined by how secure the area is and if people are actively searching for you. Passing unnoticed through a public space will be trivially easy, but passing unnoticed through a place where the presence of any person would be a cause for alarm will be difficult. If you act highly unusual for the environment, take any aggressive action, or combat begins, then this effect ends.

Conversely, you can use this event to create the the opposite effect, causing you to become extremely noticeable, stand out in a crowd, and become impossible to ignore.

Rank 2: During your ***Fade Self*** events, anyone that witnesses you, including those that know and recognize you, has selective memory loss of your presence. Those affected do not experience lost time, they just cannot recall your presence or actions during this time. If an action you take has overt lasting consequences, it will be attributed to the next most plausible source instead of you. Video cameras will still capture your actions during this time, however, your face will appear too blurry to identify.

Rank 3: You can induce the following cascade event.

Invisibility
A willing target you touch (or yourself), becomes completely invisible for a number of minutes equal to your Charisma score plus the sum of your ranks in Schizosomata styles. Any time an invisible target makes a violent motion, including attack or dodge actions, this effect immediately ends.

Shift

This style allows you to change your body, appearance, and even physical attributes.

Rank 1: You permanently become idealized version of yourself. You decide whether that means attractive, youthful, itimidating, or any other appearance you aspire to. At the GMs discretion, this may help or hinder social rolls where appearance is important.

Rank 2: You can induce the following non-combat cascade event.

Shapeshift
Over the course of an hour you slowly and permanently shapeshift into a person of any appearance, build, gender, skin color. For every 10 centimeters or kilograms that your new body differs from your original body, you must spend an additional point of Entanglement to complete the transformation.

Rank 3: When using the ***Shapeshift*** event you may also redistribute your starting physical attributes (Strength, Finesse, Perception, Stamina, Agility, and Wits). Any attribute points you have gained from styles cannot be redistributed this way.

Sublimation

Available in Willpower

The following 3 Sublimation styles, *Sublimed Storage*, *Yau Combat*, and *Yau Traversal* allow you to enter the Yau, a parallel realm that mirrors normal space. Any rank in these three styles grants the following non-combat cascade event.

Sublimate Self
This event causes you to enter or exit the Yau, exiting the Yau does not cost Entanglement but still takes a few minutes of concentration. While inside the Yau you cannot interact with, or be detected by, anything in physical space, however the physical world casts shadows into that Yau that impede your movement. You can easily pass through the shadow of any object that has moved within a number of minutes equal to the sum of your ranks in these three *Sublimation* styles plus your **Willpower** score, anything that has been stationary for longer blocks your movement.

In the Yau your senses do no operate normally, rendering you blind and deaf. Instead you have an omnidirectional sense called chromaception that can detect the motion and position of anything within a meter of you, however if you have ranks in the style *Chromaception* this range increases to match the range of the situational awareness granted by that style.

When entering the Yau, you leave your unconscious body behind in the physical world. To exit the Yau, you must return to your body.

Sublimed Storage

This style lets you store physical objects in the Yau and retrieve them later. Retrieving an item puts it where you need it to be for immediate use, for example, a weapon would appear in your hand or a garment would appear already worn on your body.

Rank 1: You can store or retrieve a single object as combat action costing 4 speed. You can store as many items in the Yau as you can fit in 1 cubic meter of space.

Rank 2: You can store or retrieve 1-3 objects at once as a combat action costing 1 speed. You can store as many items in the Yau as you can fit in 2 cubic meters of space.

Rank 3: You can store or retrieve any number of objects as a free action with no speed cost. You can store as many items in the Yau as you can fit in 3 cubic meters of space.

Yau Combat

This style allows you to bring your physical body with you when entering the Yau and improves the tactical capabilities of subliming your body.

Rank 1: You ***Sublimate Self*** events are now a combat actions costing 6 speed. When entering the Yau your body vanishes from physical space and reappears when you exit. You may exit the Yau any place you can access while in it.

Rank 2: You can gain the ability to induce the following cascade event.

Blink
Teleport by entering the Yau and instantly exiting it anywhere within a range equal to 3 plus your **Willpower** score. You cannot teleport through walls or obstacles. The speed cost of this event is equal to half (round up) of the amount of Speed it would have taken to reach that location normally.

Rank 3: Your ***Blink*** events can teleport you anywhere within a range equal to 6 plus double your **Willpower** score. You can teleport through any obstacle that your ranks in *Sublimation* would allow you to pass through while in the Yau.

Yau Traversal

This style allows you to pass through more physical objects by entering deeper reaches of the Yau. Without this style, you can pass through physical objects that have moved within a specified number of minutes, with it this same number is measured in greater units of time.

Rank 1: The time an object must have moved more recently than for you to pass through it while in the Yau is now measured in hours.

Rank 2: The time an object must have moved more recently than for you to pass through it while in the Yau is now measured in days. Additionally, when you are this deep in the Yau you can effortlessly cross physical space at rates up to 1000 kilometers per hour.

Rank 3: The time an object must have moved more recently than for you to pass through it while in the Yau is now measured in years. Additonally, when you are this deep in the Yau you can ignore gravity and travel anywhere on the planet within an hour.

Telethesia

Available in Charisma

The following 3 Telethesia styles, *Clairvoyance*, *Suggestion*, and *Telepathy* sense things at a distance as well as read or influence minds. The sum of your ranks in these styles increases the distance of ally communication.

Addtionally, you can spend a point of Entanglement as a free action to enable telepathic communication between a number of willing participants equal to the sum of your ranks in *Telethesia* styles. Choose the participants when activating this style, these participants stay in telepathic contact with you and each other for the rest of the scene. Different participants cannot be chosen without activating the effect again. Telepathic communication occurs at the same speed and bandwidth of normal speech. Telepathic communication is undetectable by all means other than the Eavesdrop ability granted by the style *Analyze Cascade*. This channel of communication remains open for the rest of the scene.

The sum of your ranks in *Telethesia* styles determines the how close someone must be to you to include them in this communication.

1: Within 9 spaces.

2: Within half a kilometer.

3: Within 3 kilometers.

4: Within 30 kilometers.

5: Within 300 kilometers.

6: On the same continent.

7: In the same hemisphere.

8: On the same planet.

9: Anywhere in the solar system. Speed of light delays apply.

Clairvoyance

As a non-combat cascade event, you can sense what happens at distant locales regardless of any obstacles in the way. The range within which you can sense this way is equivalent to the range that the sum of your ranks in all *Telethesia* styles allows you to communicate across.

Rank 1: You can scry on any location within range, but you must have previously seen this location normally at some point. You only gain vision of what is occuring at this location for the next minute.

Rank 2: You can scry on any location within range, regardless of whether you have seen it before. You gain all senses at this location for the next hour.

Rank 3: You can scry on any location within range and sense what occured there at any single point in the past within a number of years equal to your Charisma score. You gain all senses of what occurred at this location and may skim through the times you can see in search of specific events.

Suggestion

As a non-combat cascade event, you can attempt to exert influence over the minds of a single target. The degree of influence you can gain is determined by your ranks in this style.

The target rolls **Willpower + Guts** against your **Charisma + Guts** to attempt to resist your influce. If the target has any Entanglement add their current number of available Entanglement points to the number of dice in their resistance roll. The results of this roll indicate how much influence you gain over the target.

Rank 1: You can attempt to stimulate a target's brain to briefly release a single specific neurotransmitter. This will allow you to create in the target a basic emotion or vague sensation. High degrees of success over your target can make this feeling extremely intense or evoke feelings that radically differ from the target's current state.

Rank 2: You can attempt to instill a suggestion in the target that they will have a hard time resisting. Tying the target's roll may only allow simple suggestion that they will not put much effort into, while greatly beating the target may allow you to issue complex commands and orders that the target is irresistably compelled to follow. The more these suggestions differ from the target's desires, the more successes you'll need to beat them by.

Rank 3: You can attempt to implant false memories into the target. The more complex and implausible these memories are, the more successes you'll need to beat the target by. Just tying their roll may only lead to instilling them with a vague deja vu, while beating them by several succcesses may allow you to completely rewrite a phase of their life.

Telepathy

As a non-combat cascade event, you can attempt to discern the thoughts and memories of others. The kinds of information you can get access to are determined by your ranks in this style.

The target rolls **Willpower + Guts** against your **Charisma + Guts** to attempt to resist you. If the target has any Entanglement add their current number of available Entanglement points to the number of dice in their resistance roll.

Rank 1: If you tie or beat the target's resistance roll you become aware of the target's overall state of mind, general emotional state, and stress level for the rest of the scene.

Rank 2: If you tie or beat the target's resistance roll you become aware of the target's entire internal monologue for the rest of the scene.

Rank 3: The more successes you beat the target's resistance roll, the more deeply you can probe into their memory. Recent memories are easy to access, while deep dark secrets will require beating the target by multiple successes.
