Strength

Tier 1: Unencumber

Your raw Strength enables you to consistently perform actions others couldn't possibly attempt.

Rank 1: The maximum amount of weight you can lift is increased by 300 kilograms. The range of thrown weapons is doubled for you. Reduce the speed cost of heavy melee weapons from 6 to 5. You can use ranged weapons that have the Mounted trait with no support without penalty.

Rank 2: The maximum amount of weight you can lift is increased by another 300 kilograms. You can wield weapons of any size in one hand or use the Dual Wield action with them. When using the Throw action while grappling, you may add your Unarmed Combat skill to this action's roll.

Rank 3: The maximum amount of weight you can lift is increased by another 300 kilograms. Your unarmed attacks now deal damage that cannot be resisted by a Stamina roll.

Tier 2: Adrenal Strength

Whether you call it focus, rage, or adrenaline, you can temporarily tap into reserves of acute strength well beyond your normal limits.

Rank 1: You can now induce the cascade event ***Activate Strength*** as an action with a speed cost of 2.

Activate Strength
You may make a number of empowered actions equal to your rank in this style. After you use that number of actions, or a minute passes without you using all of them, this cascade event ends. These empowered actions can be any combination of the following three actions.

Power Attack
Combat Action - Speed Cost: Variable
Make a Melee or Unarmed attack with its normal speed cost and add an extra die to it's damage roll. Before rolling, you may deduct as many dice as you wish from the attack roll and add them onto the damage roll.

Power Lift
Full Action - Speed Cost: Your current speed
Lift or push an adjacent object that weighs up to double what you can normally lift. You may move this object into any space adjacent to the space you end this action in.

Power Throw
Combat Action - Speed Cost: 4
You may use this action if you are in a grapple and not pinned. This functions the same as the normal Throw grappling action, however the maximum distance you can throw your opponent is doubled.

Rank 2: Any time you take damage, you may now immediately induce ***Activate Strength*** as a free action with no speed cost. When you use the Power Attack action, you may subtract any number of automatic success from the attack roll before you roll it and add them to the damage roll.

Rank 3: When you use the Power Attack or Power Throw actions, you may increase the speed cost by any number. For Power Attacks add that number as automatic successes to the damage roll. For power throws, add that number to the maximum distance you can throw your opponent (add it after any rolling and doubling). The total increased speed cost cannot exceed your current speed.

Additionally, when using the Power Lift action the maximum weight you can move is tripled instead of doubled.

Tier 3: Damage +

Rank 1: Add a bonus automatic success to all damage rolls in melee or unarmed combat. Additionally, you can now induce the ***Dominate*** cascade event as full action.

Dominate
As a part of this event you do the Grapple, Escape, or Pin action for free. You automatically beat your opponent's roll in this action.

Rank 2: Add another bonus automatic success to all damage rolls in melee or unarmed combat. Additionally, when using the Grapple action as a part of a ***Dominate*** event, your opponent is automatically pinned immediately.

Rank 3: Add another bonus automatic success to all damage rolls in melee or unarmed combat. Additionally, any time a grappled opponent's current Endurance is lower than your Strength score you may use the ***Dominate*** event to immediately render them unconscious for a number minutes equal to the difference between their current Endurance and your Strength score.

Finesse

Tier 1: Deft Combat

This style improves your stealth attacks, as well as your ability to defend yourself in close combat. Normally stealth attacks simply deal an extra 1+1 damage, with this style they deal more damage, are more precise, and can be done at greater range.

Rank 1: Your stealth attack actions deal 2+1 extra damage. When using one you may opt not make a location roll and instead decide the location that was hit, but doing so prevents you from scoring critical hits.

Rank 2: Your stealth attack actions deal 2+2 extra damage. When using one you may opt not to make an attack roll and instead automatically hit, but doing so prevents you from scoring location roll adjustments.

Additionally, you are now able to defend yourself by expertly blocking and deflecting incoming blows, because of this your melee dodge roll is now either **Finesse + Defense** or the normal roll of **Agility + Defense**, whichever is better.

Rank 3: Your stealth attack actions deal 3+3 extra damage and ignore their target's armor. Additionally, you can use stealth attacks with a ranged weapon anywhere within the weapon's range.

In any of your melee or unarmed stealth attacks you may forego the normal damage roll and instead roll only the stealth attack bonus damage (at this rank **3 + 3**). The results of this roll reduce the target's current Endurance instead of dealing damage.

Tier 2: Ambidexterity

Rank 1: When using the Dual Wield action, weapons in your main hand have their normal attack roll instead of a disadvantaged roll. You can quick draw any weapon as a free action with a speed cost of 2 and the speed cost of reloading a weapon is reduced by 1.

Rank 2: When using the Dual Wield action whichever weapon has the lower speed cost has its speed cost reduced to 2. Quick drawing a weapon no longer has a speed cost and the speed cost of reloading a weapon is reduced by 1 again.

Rank 3: When using the Dual Wield action, weapons in your off hand have their normal attack roll instead of a disadvantaged roll and the weapon with the lower speed cost has no speed cost. The speed cost of reloading a weapon is reduced by 1 again.

Additionally, when wielding a melee weapon you can execute a whirlwind strike that targets everyone adjacent to you (regardless of your melee reach). To do so, spend a point of Entanglement and then make a single melee basic attack roll with it's normal speed cost. All targets must defend against this attack result or are they are dealt the attack's damage roll to a single random location.

Tier 3: Melee +

Rank 1: Add 1 success to all melee and unarmed basic attack rolls.

If you are wielding a melee weapon that has a natural speed cost (before any functions or styles are applied to it) of less than 4 and your Finesse is greater than your Strength, use Finesse instead of Strength when rolling damage.

Rank 2: Add 1 additional success to all melee and unarmed basic attack rolls.

If you score multiple location adjustments on any basic attack roll you can sacrifice 3 of the location adjustments to either disarm (the weapon falls to the ground) or knock the target down. You can also sacrifice 6 of you location adjustments on a melee or unarmed basic attack roll to steal the target's weapon. The stolen weapon ends up in your off hand if you are armed and your main hand if you are unarmed. After using location adjustments this way roll damage for the attack normally and if you still have further location adjustments available you can use them normally.

Rank 3: Add 1 additional success to all melee and unarmed basic attack rolls.

Any space within a range of 2 is considered adjacent to you for the purposes of targeting basic attacks and triggering reaction attacks. This extended range stacks with the Reach weapon trait, so with a Reach weapon your melee range extends to 3 spaces (the increased speed cost of using the Reach trait only happens when selecting a target at maximum range).

Perception

Tier 1: Chromaception

This style grants enhanced sensory powers by allowing your Yau body to reach out over distances to constantly examine your surroundings. This has two primary benefits. First, your 360 degree situational awareness is greatly enhanced by being able to perceive the residual chromodynamic wake of physical objects and motion. Secondly, by detecting other Yau bodies and their empathic content you gain an awareness what others can perceive.

Without assistance from other styles, this style only allows you to detect objects in physical space. Anything fully in the Yau remains hidden.

Rank 1 grants the following capabilities:

- **Improved Alertness**: Add a bonus of 1 die to all **Alertness** rolls.
- **Sensorium Detection**: You know at all times if anyone can currently see you.
- **Situational Awareness**: You are always aware of the rough shape and motion of everything within 3 meters of you, regardless of darkness, blindness, or blocked lines-of-sight. Human beings are instantly recognizable to this sense and cannot hide from you within this range. You can always act in any surprise round of combats initiated from anywhere within this range.

Rank 2 grants the following capabilities:

- **Improved Alertness**: Add an additional bonus of 1 die to all **Alertness** rolls.
- **Detect Artificial Sensorium**: You know at all times if you can currently be seen video cameras or otherwise detected by audio recorders and motion sensors.
- **Mid-range Situational Awareness**: The detection range of your situational awareness increases to 9 meters.

Rank 3 grants the following capabilities:

- **Improved Alertness**: Add an additional bonus of 1 die to all **Alertness** rolls.
- **Define Sensorium**: You can tell at all times exactly what spaces are currently being observed by humans or devices and their likelihood of being observed in the next round.
- **Long-range Situational Awareness**: The detection range of your situational awareness increases to 30 meters.

Tier 2: Precision

Rank 1: You can adjust the location any firearms or ballistics basic attack hits by 1 spot more than normal.

Rank 2: You can adjust the location any firearms or ballistics basic attack hits by 2 spots more than normal.

Rank 3: You can adjust the location any basic attack hits by 3 spots more than normal.

Tier 3: Ranged +

Rank 1: Add 1 success to all of your firearms and ballistics basic attack rolls.

You can use any move action in between Aim action intervals without interrupting it and losing your accumulated successes.

Rank 2: Add 1 additional success to all of your firearms and ballistics basic attack rolls.

Any time you fire a weapon that has a bonus from an Aim action applied to it, you may opt to replace the normal number of damage dice with your Perception score.

Rank 3: Add 1 additional success to all of your firearms and ballistics basic attack rolls.

As a free action with no speed cost, you may spend a point of Entanglement at any time to start an Aim action or roll the next Aim interval immediately.

Stamina

Tier 1: Resilience

Rank 1: Your wound max increases by 1 point.

Rank 2: Your wound max increases by an additional 1 point.

Rank 3: Your wound max increases by an additional 1 point. You can make a Stamina roll to resist a portion of the damage of any physical attack as if it were an unarmed attack; this protection does not apply to damage dealt by *Evocation*, *Chromodynamism*, or unarmed attacks improved by rank 3 of the style *Unencumber*.

Tier 2: Endurance

Rank 1: Adds 3 points to your endurance score.

Rank 2: Adds an additional 3 points to your endurance score.

Rank 3: Adds an additional 3 points to your endurance score. You cannot be stunned, knocked down, tripped, or disarmed.

Tier 3: Regeneration

This style is equivalent to the auxiliary style *Regeneration* and can fulfill the same prerequisites.

Rank 1: Your wounds stabilize automatically, because of this your Endurance can never drop below 0 and you no longer require medical care to prevent bleeding to death. You automatically heal a point of damage on all locations each hour.

Rank 2: You automatically heal a point of damage on each location every minute.

Rank 3: You automatically heal a point of damage on each bodily location at the end of every round. You are immune to all diseases, drugs, and poisons.

Agility

Tier 1: Super Speed

Rank 1: Adds 3 points to your Speed score.

Rank 2: Adds 3 additional points to your Speed score.

Rank 3: Adds 3 additional points to your Speed score.

Additionally, any time you use a move action to move more than 3 spaces, dodge actions have a speed cost of 1 until your next turn.

Tier 2: Mobility

Rank 1: Using the Traverse action has the same speed cost as moving normally. You do not get your ability to use defensive actions denied by climbing or standing in rough terrain. You can move through the space occupied by any enemy without penalty. You cannot be targeted by reaction attacks.

Rank 2: Double the number of successes you roll as part of a Traverse action. When using a dodge action, you may move 2 spaces for free instead of just 1.

Additionally, anytime you are the target of a melee attack you can spend a point of Entanglement to automatically succeed on a dodge attempt, but you must move two spaces when doing so. You can always use this automatic dodge action against melee attacks, but you can also use it against ranged attacks if there is cover within two spaces of you and you move there as part of the action.

Rank 3: Triple the number of successes you roll as part of a Traverse action. When using the sprint action, the number of squares you can cross is tripled instead of doubled. By using a combination of tumbling, wall-running, and jumping, you can move to any unblocked space as long as there is, at least, 1 space worth of wall or floor somewhere on a path from the start to the destination. This has the same speed cost as moving that distance normally.

Tier 3: Active Defense

Rank 1: Add 1 success to all of your dodge rolls.

You can use a Dodge action in between Aim actions without interrupting the aim and losing your accumulated successes.

Rank 2: Add an additional 1 success to all of your dodge rolls.

Any attack that hits you due to a failed dodge roll has all of its location adjustments and critical hit levels removed.

Rank 3: Add an additional 1 success to all of your dodge rolls.

The speed cost for your dodge actions decreases by 1.

Wits

Tier 1: Priority

You can spend a point of Entanglement before rolling initiative to speed up your ability to plan and execute actions. Doing so grants the abilities described in the ranks of this style until the end of combat.

Rank 1: While active, your initiative rolls are 1 die higher than normal. When making an initiative roll, roll it twice. If you get a different number on each roll you will have two separate initiative spots. When you have two initiatives you may take an action when each number comes up during a single turn (if you have enough speed for both actions). If you get the same number on both rolls you only have a single normal initiative score.

Rank 2: While active, your initiative rolls are 2 dice higher than normal. When making an initiative roll, instead of rolling it twice as described in rank 1 you can choose a second initiative spot. You can make this choice after everyone has made their roll and you've seen the initiative order. You may take an action on the number you rolled and another action the number you chose, if you have enough speed for both actions.

Rank 3: While active, your initiative rolls are 3 dice higher than normal. When making an initiative roll, make the extra roll described by rank 1 and choose a number as described by rank 2. This will allow you to take up to three separate actions in a single turn, if you have the speed for them.

Tier 2: Passive Defense

Rank 1: Adds 1 point to your passive defense.

Rank 2: Add 1 additional point to your passive defense.

Rank 3: Add 1 additional point to your passive defense.

When you are hit by an attack that you did not attempt to dodge, you may spend a point of Entanglement as a free action in order to remove all location adjustments and critical hit levels from the attack. You may decide if you wish to do this after you know the results of the attack roll and the location roll.

Tier 3: Precognition

You can spend a point of Entanglement to gain precognitive abilities. Doing so grants you the abilities described the ranks in this style for the rest of the scene.

Rank 1: You can always act in a surprise round, regardless of circumstances. When choosing who to target with an attack, you can ask the GM if that target is going to attempt to dodge the attack or not.

Rank 2: You cannot be targeted by Stealth Attack actions. Once per round you can ask the GM what a single visible enemy's next action will be. This information is accurate unless the combat situation changes radically between when you requested the information and the time the enemy gets to act.

Rank 3: You cannot have your ability to dodge denied by surprise or flanking unless you are being physically restrained. When outside of combat, you have a vague sense of what might happen in the next few minutes, because of this you can ask the GM for hints on what is about to happen. How much information you are given is up to the GM, but the information is accurate.

Willpower

Tier 1: Entanglement +

Rank 1 grants the following capabilities:

- **Improved Entanglement**: Add 3 points to your Entanglement score.
- **Yau Body Insulation**: When inside a naturally occuring cascade event you can choose whether to completely ignore its effects or to experience it normally. In addition, you cannot be the target of the style *Telethesia* or the artifact parameter *inhibit()* without your consent. The function *noo_interface()* cannot detect you unless you wish it to.

Rank 2 grants the following capabilities:

- **Improved Entanglement**: Add 3 additional points to your Entanglement score.
- **Entangled Insulation**: When damaged by an evocation attack or a photonic attack, you may spend a point of Entanglement to cut the damage dealt in half.

  When damaged by by an entropic attack, you may spend a point of Entanglement to reduce it's damage by half.

  When you trigger the entrance effect of a *Pneumaplegia* mitigation event you can spend a point of Entanglement to ignore any further effects from this event.

Rank 3 grants the following capabilities:

- **Improved Entanglement**: Add 3 additional points to your Entanglement score.
- **Diffuse Insulation**: You may apply the benefits of Yau Body Insulation and Entangled Insulation to anyone currently adjacent to you. Any Entanglement spent protecting others this way comes from your Entanglement pool.

Tier 2: Persistence

Well controlled communication between the Yau and normal space allows you to create order where once there was nothing. This style harnesses that anti-entropic property to resist decay, aging, physical damage, and even death itself.

Persisting past your normal lifespan requires near constant two-way communication and manipulation of Yau at all times, because of this you are constantly aware of Yau spirits and they are constantly aware of you. The consequence of this is that as the years and decades go on it becomes increasingly difficult to tell the difference between the real world, the Yau, and the outright hallucinations that will slowly develop.

Rank 1: Your life expectancy is effectively infinite. If you are not killed by physical damage or blood loss you could live healthily forever. Your appearance maintains itself at the age you are most comfortable with.

Rank 2: In the event of your death, only your physical body dies. Your consciousness lives on in your Yau body.

If you have any ranks in *Chromodynamism*, *Electromagnetism*, or at least 6 ranks in the core track of the *Intelligence* style class you may use the non-combat cascade event ***Create Avatar*** after the death of your physical body.

If you have any ranks in *Sublimation*, *Telethesia*, or at least 6 ranks in the core track of the *Charisma* style class you may use the non-combat cascade event ***Create Proxy*** after the death of your physical body.

Create Avatar
You begin the process of slowly building a new physical body out of raw materials in the environment. If the site you choose to do this in is rich in organic carbon compounds and liquid water you can build a new body in 3 weeks, if not it takes 3 months. In addition to requiring raw materials, this process requires privacy. Anyone discovering your in-progress body will find what appears to be a decaying corpse, if they disturb it you will need to start the process again elsewhere. The ideal location for this process is often buried in the mud under standing water in a secluded location. Your new body has the same attributes as the original one, but you may choose its appearance. Regardless of whether that appearance is beautiful or ugly, each subsequesent body you build is slightly more uncanny and unnerving than the last.

Create Proxy
You begin the process of claiming someone else's physical body as your own by choosing a host body and bonding with it. For one week after starting this process you will be captive in this person's body, experience what it experiences. During this time you have no control over this body and can only communicate with the host or others using *Telethesia*. During the next week, you can take control over the body while the host sleeps, if your chosen host was in a coma you gain permanent control over it at the start of this week. After these two weeks, you evict the original person's consciousness and now have permanent complete control over the body. Your base physical attributes (Strength, Finesse, Perception, Stamina, Agility, and Wits) are replaced with those of the host body, but your skills and base mental attributes do not change. Regardless of what bodies you choose, each time you take over a new one you give off an increasingly palpable aura of predatory menace. This effect is barely noticeable at first, and will never impact your Charisma, but as your body count accrues you may even start requiring others to make Guts rolls upon meeting you for the first time.

Rank 3: Any time a single bodily location is dealt enough damage to disable or destroy it, you may reduce that damage by one per point of Entanglement you spend down to a minimum equal to how much damage that body part could take before being disabled or destroyed.

Tier 3: Extropy

This style empowers your ability to counter entropy so much that you can create enough raw thermodynamic energy for your body to sustain itself without external resources.

Rank 1: You no longer require oxygen to function comfortably indefinitely. You are also completely immune to the effects of extended exertion, exhaustion, Crisis Sickness, and any diseases or toxins that don't directly corrode flesh.

Rank 2: You no longer need food or water to stay healthy indefinitely. Additionally, if you are capable of using either the ***Create Avatar*** or ***Create Proxy*** events, you can now use those events before your death in order to prepare multiple bodies that you can spend an hour to begin occupying at any time.

You can only occupy a single proxy at a time and any proxies that you aren't currently occupying regain their original personality, but are now unceasingly loyal to you and will follow your instructions.

If you have multiple avatars prepared you can gain polypresence by occupying more than one at once, but your Intelligence score is split evenly between them (rounding down). Any avatar you stop occupying becomes unusable and begins to decay if you don't exit it carefully in a secluded area with the organic resources to maintain it.

Rank 3: You no longer require sleep to function comfortably indefinitely. If you do not sleep, your Entanglement balancing occurs once per day at the same time. You can now only be killed by letting your upper body reach destroyed status. Other injuries and blood loss cannot kill you, but they can still render you unconscious, which you will recover from at the normal rate.

Intelligence

Tier 1: Analyze Cascade

This style increases your comprehension of the fundamental principles underpinning cascade interactions between the Yau and normal space. This knowledge allows you to discern details about cascade events, artifacts, and styles than would otherwise be available.

Rank 1 grants the following capabilities:

- **Analyze Artifact**: By spending an hour closely examining an artifact you can identify and enumerate all of its functions and parameters.
- **Detect Entanglement**: You can tell if someone has styles and roughly how much Entanglement they have just by looking at them.
- **Detect Event**: You can sense the exact boundaries of any cascade event.
- **Locate Artifact**: Whenever an artifact is within a number of meters equal to your Perception score multiplied by the number of ranks you have in this style, you will immediately become aware of its presence and the exact direction to it.

Rank 2 grants the following capabilities:

- **Analyze Event**: You can tell the type, nature, intensity, and probable origin of any cascade event by being near it or in it.
- **Detect Aperture**: You can see any objects that have been stored in the Yau by the style *Sublimation Storage*, the function *aperture()*, or any other means.
- **Style Comparator**: You can tell just by looking at someone whether they have more styles or fewer styles than you.

Rank 3 grants the following capabilities:

- **Detect Anomaly**: You can immediately tell if anything you see originates from, or is manipulated from, somewhere outside of natural physical space. This ability can detect if something came from a different worldline, was assembled by Yau based entity, is controlled ***Create Proxy***, or *Telethesia*, was created by ***Create Avatar***, or has an otherwise unnatural origin.
- **Eavesdrop**: Anytime someone uses the style *Ally Communication* or the style *Telethesia* within a kilometer you will immediately become aware of the identities of the participants and, if you wish, the content of the information being transmitted. This ability does not allow you to modify or participate in the any communication that you happen to overhear.
- **Enstylization Quotient**: You can tell just by looking at someone how many styles they have and what style class they have the most ranks in.
- **Predict Event**: You can predict roughly where and when the next cascade event or worldline incursion within a few kilometers will occur, as well as what the nature of the event will be.

Tier 2: Episemiotics

Your Yau-body can reach out to interface with others, enabling you to understand communication on an empathic level or even to steal memories from others.

Rank 1: You can comprehend, but not speak, read, or write, the spoken language of anyone you can currently see.

Rank 2: You can speak, read, or write any language as fluently as anyone that you can currently see.

Rank 3: You can now induce Excise Memory cascade event.

Excise Memory
Any single fact that a single target knows (or falsely believes) becomes known to you as well. This fact must be simple enough to be articulated in a single sentence. You may spend an additional point of Entanglement when using this event to cause the target to forget this fact after you learn it.

Tier 3: Polymath

Your Yau-body is constantly accessing and archiving the knowledge of those nearby, making you a competent jack-of-all-trades.

Rank 1: If you have zero ranks in any skill that is rolled with Intelligence by default (Hardware, Humanities, Medicine, Science, or Software), instead roll that skill as if you had one rank in it.

Rank 2: If you have zero ranks in any rollable non-combat skill, instead roll that skill as if you had one rank in it.

Rank 3: If you have zero ranks in any rollable skill, instead roll that skill as if you had one rank in it. Additionally, as a non-combat cascade event, you may treat all Intelligence skills (Hardware, Humanities, Medicine, Science, or Software), as if they had two ranks for the rest of the scene.

Charisma

Tier 1: Induce Cascade

This style allows you to create several subtle cascade effects that can be very useful in manipulating those around you or in creating full blown localized cascade events.

Any of these abilities that require an expenditure of Entanglement to activate, also require a minute of concentration and cannot be activated during combat. Some of these effects can have their size and duration increased by spending additional Entanglement. These extensible abilities start with a duration of a minute and a size of a single space that you can see, but each additional point of Entanglement increases the duration by an hour or the size from one space, to a room (or an area up to 9 meters across), to a house (or an area up to 30 meters across). Sizes larger than that cannot be achieved by a single person.

Rank 1 grants the following capabilities:

- **Cavitation Event**: You can spend a point of Entanglement to collapse a small pocket of air into the Yau, producing either a loud phantom sound or flash of light at any point you can see. This cannot be used to create voices, images, or otherwise convey complex information.
- **Induce Dissociation**: You can spend a point of Entanglement to cause an area (extensible in size or duration) to temporarily have mentally dissociative properties. Anyone with available points of Entanglement will notice the effect of being in the area, but be otherwise immune to it's effects. Anyone else in the area will be stricken with a sudden intense anxiety and be required to make Guts roll. Failing to get 3 successes on this roll results in intense fear and paranoia while failing to get any successes on this roll results in a very physical panic attack. Leaving the area or the duration ending will result in these mental effects quickly abating.

Rank 2 grants the following capabilities:

- **Disentangle**: You can spend a point of Entanglement to prevent everyone in an area from forming long-term memories by partially cutting communications between their brains and Yau Bodies. The area affected can be extended normally, but the effect occurs instantly and spending extra Entanglement on duration instead increases the the amount of lost time where no memories can be formed. The lost time is centered on the time this effect was triggered, so if you spend 4 points of entanglement to get a duration of 4 hours everyone effected will have no memory of 2 hours prior and 2 hours after the effect. People act normally during the duration of the lost time, but afterwards will have no memory of events that occurred during it. Anyone with available points of Entanglement is immune to this effect and instead loses a single point of Entanglement.
- **Élan Vital**: Your cascade bandwidth is driven by your persona instead of raw will alone. Due to this, if your **Charisma** score is higher than your **Willpower** score replace the **Willpower** component of your Entanglement score with **Charisma**.
- **Induce Minor Event**: You can spend a point of Entanglement to induce either a positive polarity event or a negative polarity event in an area (extensible in size or duration).

Rank 3 grants the following capabilities:

- **Induce Deep Event**: You can spend a point of entanglement to induce either a nonlocality event or a total wavefunction collapse event in an area. Due to the intensity of these cascade events, the Entanglement costs of extending their area or duration are doubled.
- **Sever Entanglement**: Similar to the Disentangle ability of the previous rank, this ability uses a point of entanglement to cut the connection between the brain and the Yau Body, however this ability severs the connection so thoroughly that everyone in the affected area is immediately rendered unconscious for the entire duration of the effect. Both area and duration are extensible at the normal rate. The effect comes on so quickly that people fall down on the spot, potentially causing injury if they are standing or in motion. Anyone with available points of Entanglement is immune to this effect and instead loses a single point of Entanglement. Those affected cannot be roused by any medical means, however someone with Entanglement can spend a point of it as a full action with a speed cost of 3 to awaken an adjacent person.
- **Ally Communication**: You gain a bonus rank of the auxiliary style *Ally Communication*, this rank stacks with any ranks you may already have in this style.

Tier 2: Healing

This style allows you to quickly heal yourself and others.

Rank 1: You gain the ability induce the following cascade event.

Heal
Anyone you touch instantly heals an amount of damage equal to a roll of **Charisma + your rank in this style.** on the bodily location you touched.

Rank 2: Your heal events no longer require you to touch the target, instead they have a range of 3.

Rank 3: Your heal events no longer require you to touch the target, instead they have a range equal to your Charisma score plus 3.

Tier 3: Combat Healing

This style improves your ability to heal others in tactical situations and heal multiple targets at once.

Rank 1: You gain the ***Heal*** cascade event if you don't already have it. This event now has a speed cost of 6. If you do not have ranks in the style *Healing* you must touch the target and then this event heals a single point of damage on all locations, if you do have ranks in *Healing* it heals damage according to your rank in that style on all locations and can be done at the range determined by that style.

Rank 2: Your ***Heal*** events now heal everyone, friend or foe, adjacent to the target for the same amount on all locations.

Rank 3: Your ***Heal*** events now have a speed cost of 4 and heal anyone you choose within a radius of 3 of the target for the same amount on all locations.
